

Stolit Milano®

The versatile, organic
ultra-fine textured render

Stolit Milano® is a very fine, thin-layer facade render that can be modelled. Used on external wall insulation systems, rendered rainscreen cladding systems and on rendered masonry, it is applied in a thin coat and can then be finished in many different ways.

Its broad application and colour spectrum combined with hand-crafted application techniques and other coating combinations enable a wide range of surface textures. Depending on the finish, Stolit Milano® can appear discreetly Mediterranean, create a metallic impression or have the surface look of a fair-faced concrete element. The organic Stolit Milano® ultra-fine textured render is a real all-rounder!

Stolit Milano®

Versatile and elegant

Stolit Milano®, fine spot-smoothing technique

Stolit Milano® impresses with a wide range of possibilities for creating unique textures. Entire facades or, as in this case, individual elements become eye-catchers.

Stolit Milano®, sanded concrete character

Stolit Milano® is applied in a single layer using a trowel technique. In this case it is applied onto dark-coloured Stolit K 1.5 finishing render and sanded after drying. This variation reveals the materiality of the entire coating including the marble grain texture. It creates the impression of a concrete character with its deep texture.

Stolit Milano®, fine spot-smoothing technique

This variant emphasises the interplay of the different hues of a single colour shade. In a simple way, this effect gives the facade a lively and discreetly Mediterranean appearance.

Stolit Milano®, coarse spot-smoothing technique with StoColor Metallic glaze

Stolit Milano® is applied in several layers using a trowel technique. Here, the final layer forms a partially applied "coarse spot-smoothed" finish that is emphasised by a glaze coating with StoColor Metallic. This creates individual surfaces with a lively texture.
